Seclira® WSG

Insecticide

CONFIDENCE STARTS HERE

Undetectable and fully dependable

Combining outstanding insect control with a convenient, versatile formulation, Seclira® WSG gives pest management professionals a powerful new option for use in and around homes and other properties.

- Non-staining, odourless, broad-spectrum and non-repellent insect control
- Granules dissolve into a clear solution for use as an undetectable surface spray
- Unique, fast-acting active ingredient delivers long term control
- Indoor and outdoor use reduces the number of products pest professionals need
- Complements the use of other products in the Seclira range

Seclira® WSG

Insecticide

Where to use Seclira WSG

Suitable for use indoors and outdoors across a wide range of domestic, commercial, industrial and public buildings and facilities, as well as on transport including planes, trains and ships.

How to use Seclira WSG

SITUATION	PEST	RATE	COMMENTS
Domestic, commercial, industrial and public buildings and facilities (including but not limited to food processing establishments, shops, factories, farm buildings, hotels and backpacker accommodation, ships, trains, aeroplanes, offices, schools, storerooms, hospitals, barracks, private houses and external areas associated with such establishments)	**Ants**	**RATE per 100 m²** Non-porous surfaces: 10 g in up to 5 L water Porous surfaces: 10 g in up to 10 L water	**DIRECT NEST TREATMENT:** Spray directly into nest entrances. Pre-wetting sandy and porous soils with water can improve penetration. Thorough soaking is required to destroy the nest. **TREATMENT WHEN NESTS CANNOT BE LOCATED:** Apply to all outdoor ant trails and areas where ants are foraging. Search for ants underneath materials (e.g. rocks, timber) and apply to these areas. **EXTERNAL PERIMETER TREATMENTS:** Apply to all potential entrance points of the structure. Use a spray nozzle adjusted to produce a fine mist in wall voids or other enclosed cavities in order to avoid run-off. Treat soil or other ground covering adjacent to the structure (in a band up to 3 metres wide) where ants are seen, have been found, or can find shelter.
	Wasps	**RATE per 100 m²** 40 g in up to 5 L water	Apply diluted spray to the point of run-off directly to the nest, ensuring thorough and even coverage. When all adult wasps have been knocked down, remove or cover the nest.
	Fleas	**RATE per 100 m²** Non-porous surfaces: 10 g in up to 5 L water Porous surfaces: 10 g in up to 10 L water	Clean and vacuum infested areas and dispose of dust collected in a sealed plastic bag. Lightly spray infested areas concentrating on areas under furniture etc. See also the label note on application to carpets.
	Mosquitoes and flies	**RATE per 100 m²** Non-porous surfaces: 20 g in up to 5 L water Porous surfaces: 20 g in up to 10 L water	Spray surfaces where flies and mosquitoes are known to come to rest. **Flies:** include external surfaces that are exposed to the morning sun. Best results for the control of house flies are achieved when treating non-porous surfaces. **Mosquitoes:** spray walls, awnings and fences in proximity to buildings.
	Cockroaches	**RATE per 100 m²** Non-porous surfaces: 30 g in up to 5 L water Porous surfaces: 30 g in up to 10 L water	Apply to known and potential cockroach harbourages. A barrier application around areas where cockroach infestations may be originating is also suggested. Repeat application as required.
	Bed bugs	**RATE per 100 m²** Non-porous surfaces: 40 g in up to 5 L water Porous surfaces: 40 g in up to 10 L water	Apply as a coarse, low pressure spray at a rate of 1 L per 20 m² up to but not exceeding the point of runoff to skirting boards, carpet edges, cracks, crevices, in and behind bed heads and bed frames, bedside tables and cupboards. For cracks & crevices, pin stream application is recommended.
	Spiders	**RATE per 100 m²** Non-porous surfaces: 30 g in up to 5 L water Porous surfaces: 30 g in up to 10 L water	Spray spiders, their webbing (web spinning spiders) and areas where spiders may hide directly. For maximum efficacy, leave any webbing is left in place for a few days after application.
	Stored product pests on non-porous surfaces only	**RATE per 100 m²** 20 g in up to 5 L water	Use as part of an integrated strategy to prevent development of insect populations. Infested areas should be cleaned before application and regularly thereafter. **Beetle pests:** pay special attention to sheltered areas such as cracks and crevices and in and around shelves. **Adult moths:** apply Seclira WSG to walls and surfaces where the flying adult moths come to rest. **DO NOT apply to food or onto food preparation areas. DO NOT apply to porous surfaces.**
	Crawling insects Including: Crickets Millipedes, Pillbugs & Springtails	**RATE per 100 m²** Non-porous surfaces: 40 g in up to 5 L water Porous surfaces: 40 g in up to 10 L water	**Internal:** Make spot and/or crack and crevice applications into hiding places and entry points such as void areas, moist areas, openings around pipes and sinks, under refrigerators or vending machines, across lower doorway frame and window openings. **External:** Apply where pests rest, trail and harbour, such as structural and other voids (including in and around doors, windows, utility entry points, behind siding and weep holes), eaves, around lights or other areas that attract insects, landscape materials, garbage bins, and shaded areas.
	Brown marmorated stink bugs (BMSB)	**RATE per 100 m²** Non-porous surfaces: 30 g in up to 5 L water Porous surfaces: 30 g in up to 10 L water	Apply to known and potential harbourages. A barrier application around areas where BMSB infestations may be originating is also suggested. Repeat application as required.

Refer to the product label for full Directions for use.
